

Berezha Security

offensive-minded guardians of your safety

Walk through this presentation to find out

- What is Berezha's **goal and the reason why** we've created it
- What are **our services** and types of their provisioning
- What **methods and tools** we use to deliver high quality services
- What do our clients and partners get from **working with us**
- **Why** our clients choose Berezha
- Who are Berezha's **founders and leaders**

Why we've created Berezha Security

- We are deeply concerned by the shortage of expertise and service quality in the information security industry
- We've been in pentesting, network security, and incident response for quite a while, so we've decided to join our forces and bring affordable high quality security services into the market
- To help our clients access the best skill in the industry, we leverage the power of the community we have helped grow while working together on creating UISGCON, the largest infosec conference in Ukraine
- We think it is pretty cool and quite fun

Berezha services

Security Assessments

- **Network penetration tests** to reveal poor security decisions that may harm your business, and then help you remediate those risks
- **Social engineering audits** to test your employees' resistance to the attacks on human vulnerabilities
- **IT infrastructure security audits** to identify security issues that undermine security and compliance of your business

Berezha services

Improvement Consulting

- **Continuous security assessments** to keep you up-to-date with your current security posture
- **Issue remediation** to assist you in getting rid of security vulnerabilities quickly and efficiently
- **Secure operations** to help you continuously maintain high level of information security
- **Security trainings** and knowledge transfer to help your personnel build and maintain effective security management processes
- **Security awareness** to help you leverage your most effective and most under-estimated security tool – your people

Berezha methods and tools

Standards and methodologies

- **Penetration Testing Execution Standard (PTES)** – the industry's most broad and profound penetration testing manual
- **Open Web Application Security Project (OWASP)** – the collection of standards and guidelines for application security best practice
- **Open Source Security Testing Methodology Manual (OSSTMM)** – the operational security performance measurement and reporting system

Automation tools

- **Kali Linux** – the best professional penetration testing distribution
- **Rapid7 NeXpose** – the fastest and most accurate general purpose vulnerability scanner
- **BurpSuite Pro** – the world leading web application security assessment toolkit
- **Metasploit Framework** – the best exploitation and post-exploitation platform maintained by the pentesting community in its best

Working with Berezha

For our clients

- Straightforward online **price and duration calculator** based on your desired scope
- **15% discount** for returning customers
- **One free retest** within 2 months after pentest completion
- Following **retests at 15%** of initial pentest price

For our partners

- **White-label services** at 25% discount for partners who wish to fully engage into the project contracting and delivery
- **10% commission** per successful lead generated
- Client conditions *don't apply*

Why Berezha

- Highly qualified penetration testers with tens of projects and happy customers behind them
- Plentifully certified core team
- Social engineering AKA “human hacking”
- Timely delivery of results
- Ability to emulate real world attacks of any complexity
- Flexible pricing based on your priorities
- Competitive price

Berezha leadership

Kos Korsun
Director

As former deputy head of Cybercrime Division at Security Service of Ukraine, Kostyantyn was one of the founders and the first head of CERT-UA. After resigning from the service, Kos acted as Regional Director for Ukrainian Research Office of iSIGHT Partners, international cyber threat intelligence company.

Currently, Kos combines numerous roles in Ukrainian cyber security community, including his Chairmanship for NGO Ukrainian Information Security Group and strategic leadership for Berezha Security.

Andrey Loginov
VP, Business Development

Andrey is an expert in the field of cyber security and telecommunications with more than 15 years of experience in numerous international endeavors. Andrey acted as CTO and Solution Architect at Internet Service Providers, telco operators, and system integration companies.

At Berezha, Andrey is aimed at our business success, constant growth of operations, and engaging new clients and commercial opportunities.

Vlad Styran
Director of Operations

Vlad is an internationally known infosec expert with 10+ years of experience in Penetration Testing, Security Audit and Consulting. Vlad currently holds OSCP, CISSP, and CISA credentials and was certified as C|EH, ISO27001LA, and many more throughout his career. Vlad often speaks at infosec conferences on the topics of Social Engineering threats and Penetration Testing methods and techniques.

At Berezha, Vlad is responsible for resource management and delivery of high quality security services.
